I am Polu Aswini, a B.Tech student majoring in computer science and engineering with a CGPA of 8.5. Proficient in C, Python, and Java, my expertise lies in front-end development. I thrive on enhancing user interfaces and am eager to contribute to projects with a focus on intuitiveness and visual appeal.

In my recent 3-month data science internship, I applied statistical analysis and machine learning techniques to real-world datasets, refining my skills in Python and R. Collaborating on various projects, I gained valuable insights into data visualization.

My objective is to expand my skill set by delving into new technologies and collaborating with mentors on innovative projects. Passionate about staying ahead in technological advancements, I actively seek mentorship opportunities to deepen my understanding and apply my knowledge in practical, impactful projects. Eager to embrace emerging technologies, I believe mentorship is crucial for honing practical skills in the ever-evolving tech landscape.
